## WEEK 1 STUDY GUIDE

## The Big Picture

We begin the course with a formal mathematical framework for defining and combining probabilities, and a mathematical definition of "random quantity."

- The basic rules of probability are the same as those for proportions. To find a probability, you have to figure out an appropriate combination of rules to use.
- Numerical calculations quickly get large. Even in this age of powerful computers, mathematical approximation is often important for computation and insight.
- One of the rules enables you to update probabilities in the light of new information. This is a fundamentally important skill in data science. Assumptions matter, for identifying the right methods to use as well as for interpreting results.
- In Data 8 you saw a statistic defined as a number that you compute based on a sample. The more general concept is that of a random variable, which is a function on the outcome space.
- Distributions describe how probability is spread over a set of values. Every random variable has a distribution; pairs and larger groups have joint distributions.

## Week At a Glance

| Tue 1/16 | Wed 1/17 | Thu 1/18 | Fri 1/19 |
| :--- | :--- | :--- | :--- |
| Lecture Sections  Mega sections <br> HW 1 (due 5 PM Mon <br> 1/22)  Lab 1 Party 9 AM to 11 AM  <br> Lab 1 (due 5 PM Mon <br> 1/22)  Party 2 PM to 4 PM  <br> Work through Chapter 1 Work through Chapter 2 Skim Chapter 3 Work through Chapter 3 <br> and skim Chapter 4 |  |  |  |

## Reading, Practice, and Class Meetings

| Book | Topic | Lectures: Prof. A. | Sections: TAs | Optional Additional Practice |
| :---: | :---: | :---: | :---: | :---: |
| 1.1, 1.2 | Probability as a function - 1.1 defines the domain - 1.2 shows how to find probabilities assuming equally likely outcomes | Tue 1/16 <br> 1.3-1-5 with an emphasis on the math more than the computation <br> 2.1, 2.3, 2.5: The relation between axioms and rules; conditioning | Wed 1/17 <br> - "Balls in boxes": how this helps with visualization in problems that look very different from each other <br> - Exponential approximation <br> - What is common to Ch 1 Ex 7, 4, 6, 8, and Ch 2 Ex 12 | Chapter 1$1,2,10$ |
| 1.3, 1.4 | An example of an exact calculation, using the product rule of counting - 1.3 has the general calculation - 1.4 has the numerical computation in a special case |  |  |  |
| 1.5 | The first of many exponential approximations in the course |  |  | Chapter 2 $1,5,6$ |
| 2.1, 2.3 | The axioms and basic rules -2.1 is about addition, and hence also subtraction - 2.3 is about multiplication, and hence also division (crucial for conditional probabilities) |  |  | If you have time, try 14. It's popular with quant interviewers. |
| 2.5 | Bayes' Rule: updating probabilities by conditioning probabilities by conditioning |  |  |  |
| 2.2, 2.4 | Examples. Don't just read them - work them out |  |  |  |

| Book | Topic | Lectures: Prof. A. | Sections: TAs | Optional Additional Practice |
| :---: | :---: | :---: | :---: | :---: |
| Ch 3 | Random variables <br> - 3.1 has the definition <br> - 3.2 defines the distribution of the random variable, and shows how to find probabilities of events based on the random variable - 3.3 shows how random variables can have two kinds of equality | Thu 1/18 <br> - The key ideas in Chapters 3 and 4, focusing more on the |  | Chapter 3 $4,7$ |
| Ch 4 | Pairs of random variables <br> -4.1 is the two-variable version of 3.2: joint distributions, and finding probabilities <br> - 4.2 has examples you should study <br> - 4.3 shows how to extract the behavior of one random variable from the combined behavior of two <br> - 4.4 shows how to update chances for one random variable given the value of another <br> - 4.5 looks at how joint distributions help us understand dependence and independence; note the acronym "iid" |  | - Conditioning and Bayes: points to notice - Random variables and equality <br> - Chapter 2 Ex 13 <br> - Chapter 3 Ex 3, 5ab <br> - Chapter 4 Ex 5 | Chapter 4 <br> Do as much as you can of all five exercises, but it's fine to spread that over Week 2 as well. |

Chapters 3-4 aren't difficult technically, but they contain many basic concepts and essential terminology.
